### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/31/04 has been entered.

### Specification

- 2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: from amended claims 9 and 19 "polyether-block polyamide polymer" needs to be added to the specification.
- 3. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the middle portion diameter being between about .1-.25 mm greater than the first end portion diameter and the second end portion diameter needs to be added to the specification.

Art Unit: 3765

# Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Fischell et al. (US 6,221,043).

Fishcell et al. provides a stent delivery system comprising a catheter having a catheter shaft and a medical balloon mounted thereto (figure 6, identifiers 60, 62, 63, 64, 65: column 7, lines 64-67 through column 8, lines 1-21). The medical balloon having a non-inflated state and being inflatable to an inflated state (column 2, lines 26-29), a stent mounting region and a stent disposed about at least a portion of the stent mounting region (figure 6, identifier 60). The stent mounting region having a middle portion, a first end portion adjacent to the middle portion and a second end portion adjacent to the middle portion (figure 6, identifiers 66, 67 and 65). A first cone being adjacent to the first end portion and having a first waist engaged to a first portion of the catheter shaft and the first end diameter being greater than the first waist diameter (figure 6, identifiers 64 and 68). A second cone being adjacent to the second end portion and having a second waist engaged to a second portion of the catheter shaft and the second end diameter being greater than the second waist diameter (figure 6,

Art Unit: 3765

identifiers 64 and 68: column 8, lines 1-10). When the medical balloon is expanded the middle portion pushes against the stent before the first end portion and before the second send portion (column 7, lines 45-63).

### Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 3 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischell et al.

Fischell et al. provides a stent delivery system as described above in claim 1. However, Fishcell et al. fails to teach the balloon being manufactured from polyesters, polyethylene terephtalate, polybutylene terephathalate, etc. Further, Fischell et al. fails to teach the balloon having in the non-inflated state the middle portion being .1-.25 mm greater than the first and second end portion diameter.

In regard to claim 3, Fischell teaches the balloon having a middle portion that has a greater diameter than the first and second end portion diameters.

It would have been obvious to have provided the middle and end portions having a differing diameter between .1-.25 mm or any other dimension, since any dimension in which the middle portion has a greater diameter than the first and second end portions and sized to be used in the human body as a stent delivery system would be a equivalent dimension.

Art Unit: 3765

It would have been obvious to have provided the balloon manufactured from a variety of suitable polymer materials, including polyethylene terephtalate, polyesters, polyubutylene terephatahalate, etc., since all are polymers that are suitable for medical balloon devices and supported in Applicants specification (page 5, lines 6-14).

## Allowable Subject Matter

- 7. Claims 12-21 are allowed.
- 8. Claims 5, 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alissa L. Hoey whose telephone number is (571) 272-4985. The examiner can normally be reached on M-F (8:00-5:30)Second Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Calvert can be reached on (571) 272-4983. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
